The above mentioned article has been retracted by its authors and the editors. Anomalies were discovered in several images. The authors acknowledge that the anomalies compromise the scientific integrity of the paper. All the authors have agreed to the decision to retract this paper; they apologise to the journal and its readers.

As these issues were brought to the editors' attention before the final version of record for the article was published, this notice of retraction replaces the early view version of the article. The editors thank the authors for their cooperation in the matter.
