

CORRIGENDUM

"Salmeterol in exercise-induced bronchoconstriction in asthmatic children: comparison of two doses" F.M. de Benedictis, G. Tuteri, P. Pazzelli, A. Nicoll, D. Mezzetti, R. Vaccaro. *Eur Respir J.*, 1996; 9: 2099–2103.

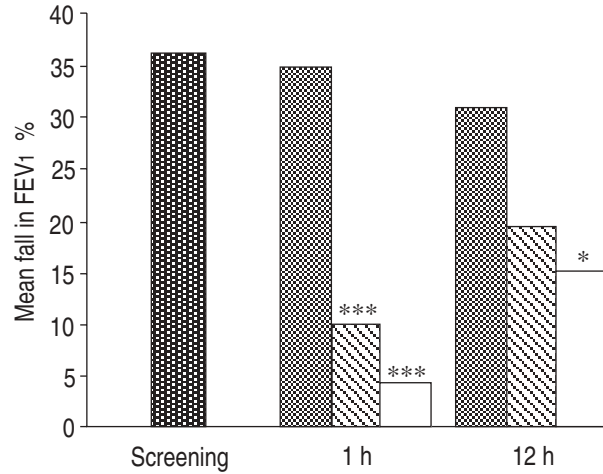

Fig. 1. – Mean percentage decrease in forced expiratory volume in one second (FEV₁) at screening and after the first and second exercise test with each treatment. : placebo; : salmeterol 25 µg; : salmeterol 50 µg. *, ***: p<0.05, <0.001 vs placebo.

Figure 1 was incorrectly printed. The figure is now correctly printed with no significant difference between the 25 µg salmeterol group at 12 h and the placebo group.
